

Company: Clusterid®

Project: Stimulation of the Trigeminal and Vagus Nerves to Aid in Relieving Neurological Pain Due to Chronic Primary Headaches

Author: Felisha Lopez

Overview: We are here to assist individuals suffering from disabling neurological pains by introducing a non-invasive and easy to use product. Our product makes use of binaural beats, transcutaneous stimulation of the trigeminal nerve and vagus nerve to aid in relieving neurological pain due to chronic primary headaches such as migraines, cluster headaches and tension-type headaches.

We aim to provide an affordable, safe and effective method of treatment to reduce and/or alleviate chronic migraine, cluster headache and tension type headache attacks. Our goal is to reduce the dependency of medications to increase quality of life by promoting stress relief for an overall better lifestyle and improved mental health.
